Part I Writing (30 minutes)

Directions: For this part, you are allowed 30 minutes to write a short essay on the following question. You should write at least 120 words but no more than 180 words.

【题目一】应聘者有硕士文凭，招聘者说：“简历不错，但是别人都是博士文凭”。

【范文一】

As is vividly illustrated in the picture above, in the middle of the picture stands an employer, saying sorry to an applicant because his master's degree can not compare with other applicants' Doctorate degree.

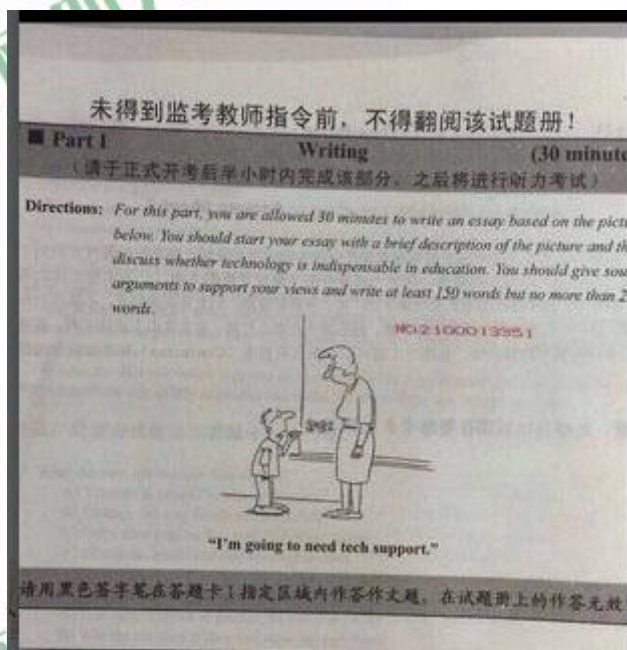

Unfortunately, it is a fact that a majority of companies over-focus on study, ignoring employees' practical skills of solving issues, which has negative influence on graduate students. For one thing, the job market will be worse than ever and an increasing number of graduate students will wait for employment. For another, students may turn their blind eyes to practice, losing the basic ability to cope with problems.

In order to address this social problem, two effective measures should be taken. First, a series of policies as to fair employment should be drawn up to guarantee every graduate student has equal opportunity. Second, it would be more beneficial if students keep a balance between study and practical skills, which will improve their competitiveness in job-hunting.

【题目二】

【范文二】

As is vividly shown in the picture above, in the front of the class stand a boy and his teacher. When the teacher asks the boy a question written on the blackboard, the boy wants to seek tech support rather than working it out by himself. Simple as the drawing is, the meaning is as deep as an ocean.

Unfortunately, it is a fact that a majority of students over depend on technology. There is no denying that technology is one of the most efficient media for students to gain information that they cannot learn from books, which expands students' horizons and enriches their thoughts. However,

overuse of technology has negative influences. First, with the advent of information age and the upgrade of functions, an increasing number of children are obsessed with those entertainments, which can easily attract their attention and deprive their ability to think by themselves.

As one of youngsters, I think as long as we can take advantages of hi-tech reasonably, our learning process will be highly beneficial. In addition, students themselves should keep it in mind that independent thinking comes first while tech support just offers assistance.
