

Learning is a daily experience and lifetime mission.

Undoubtedly, learning is a daily experience and lifetime mission. For instance, Madam Curie, who conducted pioneering research on radioactivity and became the first woman to win a Nobel Prize, was known for her persistence in learning.

Several reasons, both social and individual, could account for the importance of constant learning. Firstly, in an age of ruthless and relentless competition, only by learning constantly can we bring our potential and ability into full play and catch up with the times. Secondly, learning does not only help us acquire knowledge, but also enriches our lives and broadens our horizons. Thirdly, science and technology change with each passing day. Without constant learning, it would be impossible for us to update our knowledge.

Accordingly, it is constant learning that really matters in achieving success in modern society. In my humble opinion, it is high time that parents and teachers made joint efforts to encourage children to read more books instead of playing computer games all day.
