Is Mobile phone for Student?

Nowadays mobile phones are becoming more and more popular among the middle school students ,but every coin has two sides. Almost everyone has a mobile phone. However, is it good for students?

In my opinion, it's good for students to take phones to school . For example, if we are in danger by chance, we can use phones to ask for help. What's more, our parents and friends can communicate with us by phones wherever we are .After class, we can play games on phone to relax.

However, many people are against students take phone to school, especially teachers. Many teachers think that most of students often send messages by phones during the class. What's more, many students spend so much time in playing games on the phones that can not listen to teachers well, it's bad for their study. At the same time, it costs much money.

Above all, it's good or bad depends on ourselves. I think, we can deal with it well.
